

**IMPORTANT:** This procedure requires access to the interior of your unit. If you are not able to gain access, contact your dealer, as they should have a master key. The master key does not, however, unlock the deadbolt. If your deadbolt is locked, you will need to gain access another way (either through your pass-through storage door, or ramp door, if possible).

Figure A

Remove the 4 phillips screws on the interior plate of the door handle (shown in Figure A).

Pull or gently pry the plate away from the door to separate.

Set screws and handle aside for re-installation.

Once handle is separated, you will see a sticker with a 3-digit number located toward the bottom of the exterior handle plate. This is your key code. (Shown in Figure B) Make a note of this in your Owner's Manual for future reference. Once code is noted, re-install the door handle.

To order a replacement, please contact us at: [info@imperial-outdoors.com](mailto:info@imperial-outdoors.com). Include your VIN# and key code in your email for faster processing.
